After we have found the 2 Q, the relation which it bears to the median gives us a still better idea of the variability of the group. If it is desired to compare the variability of the group in several traits, the relation of the 2 Q to the square root of the median is more exact than either of the figures before suggested because this measure will be less affected by errors due to inaccuracy of measurements, or to the small number of measurements made. In the table below, 2 Q, the per cent, which 2 Q is of the median, and the per cent, which 2 Q is of the square root of the median are given. This table is derived from the frequency tables, Tables X to XXVII inclusive. In the diagrams which follow, the variability is expressed graphically. The heavy line gives the distribution based on the average of the first and second years figures, while the dotted line gives the distribution for the first year s figures from those cities which reported both years. Along the horizontal axis is indicated the per cent, of the total (or cost per pupil), while the vertical distance indicates the number of cases. This method of indicating variability enables one who is accustomed to this mode of representation to take in at a glance at least the more striking features. It will be noticed that in the main...
